

Magnetic separator Classic with a high efficiency

Magnetic separators are especially irreplaceable for the purification of grinding emulsions and oils. However machines offered at the market vary in their performance considerably.

Based on more than 50 years of experience of our predecessor, we can offer an efficient and optimised series of magnetic separators in various sizes.

Magnetic separators with a capacity between 60 l/min and 400 l/min have an aluminium cast casing. Machines with a capacity between 400 l/min and 600 l/min are welded constructions made of stainless steel. The magnetic filter system MA 100 (100 l/min for a viscosity of 6 mm² /s) can be seen on the photo above. The casing of the magnetic roller has been removed to show the arrangement of the permanent magnets.

Magnetic separators are also often used as main-filter in a filter system. Our photo shows the filter system FA - MA100 with tank and pump.

Please inform yourself about the performance parameters of the different products on our technical datasheets or look at our homepage:
